

Quality testing throughout construction process

No risk of defective construction work – we help you complete major projects safely.

As the developer of a major project you have to be able to be certain that the construction work is carried out properly and flawlessly. DEKRA gives you this security throughout the whole project. Our experts assess and test both the construction work and implementation of building services engineering during all the important construction phases using random samples. As a result, possible errors and faults can be identified early and you prevent any loss of time and unnecessary risks.

What quality testing during construction means

Poor construction work is not just annoying. It can significantly impair the financial success of your project and even put it at risk. The larger and more complex a building project is, the greater your risk is as the building owner that building faults will lead to delays and even to a permanent drop in value. It is often difficult to track the evidence of responsibilities afterwards.

Quality testing during construction by experts from DEKRA already gives you the security during the construction phase that the properties and qualities agreed in the building contract are actually being implemented. And it identifies any possible faults in good time before they are built over. Thus preventing any subsequent rebuilding or renovation work.

Independent DEKRA experts are already happy to support you during the planning phase and help you to avoid foreseeable risks. They also professionally support you with the final inspection and handover of the building.

What DEKRA offers you

Our experts have the extensive knowledge and experience that is required for quality testing during construction. Your advantages:

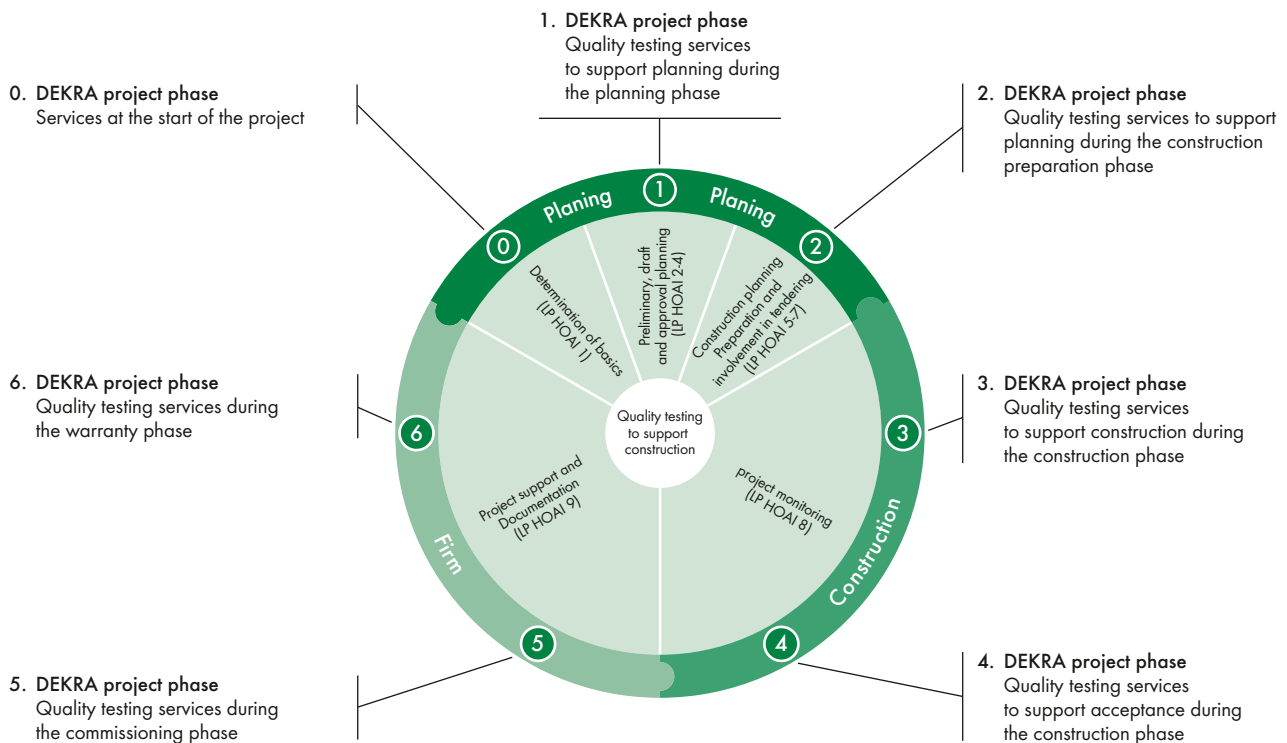

- > Support and construction inspection by independent experts
- > Precise comparison with specified quality and construction standards
- > Qualified comparison with standards, directives and regulations
- > Early identification of construction errors and faults
- > Advice about asserting your claims
- > Prevention of unnecessary delays, corrections and renovation work
- > Protection of your investment by quality assurance and optimising the value

We support you as a professional and neutral partner right from the start: practical, uncomplicated and reliable.

Comprehensive support in every phase

Quality testing during construction mainly focuses on the on-site inspections by DEKRA construction experts during the construction phase. However, we are also happy to advise you during planning as well as with the final inspection of the contractual services once the construction work has been completed.

Our experience

Everyone is talking about safety. We are doing something about it. Regardless of whether it's for information or advice, for measuring, testing or certification: we are not far away from you. Or do you know any other safety service provider who is there for you all over Germany with such a comprehensive, standardised range of services and consistent quality?

Get an idea of our services for quality testing during construction or talk to us personally straight away. We look forward to talking to you.

Other services you benefit from
